

The text below is about the account payable process. It starts with entering purchase order details.

Once entering purchase order details occurs, creating a receiving report should be done.

When creating a receiving report is completed, one or more of the following paths should be executed: gathering the receiving report, doubling check a three-way match, reporting errors to relevant team member.

When gathering the receiving report is completed, the next tasks should be gathering the vendors invoice and confirming all documents have been amended, they should be done in parallel.

After that, checking dates to avoid penalty charges needs to be done.

The process is now completed.
