

The following description is about the Account payable process which starts with the sending to the receiving department.

When a sending to the receiving department is completed, a receiving report needs to be created.

When a receiving report is created, the next tasks should be verifying that all documents have been modified and double check a three-way match, and that they should be done parallel to this.

Once all pre-tasks are completed, the process is split into 2 parallel branches: creating the vouchers and storing them in the paid invoice file.

Once a voucher creation occurs for the documents, one or more of the following paths should be executed : - Posting all documents ; - Schedule the payment.

After planning the payment, the invoice should be entered into the Accounts payable.

After recording in paid invoice file, a check should be done to avoid penalties.

The process is completed now.
