

The following description is about the payor account process which begins when you file a copy for internal records.

When a copy is completed for internal records, you need to create a receiving report.

Once creating a receiving report occurs the process is split into 2 parallel branches: gathering the receiving report and confirming that all documents have been amended.

After gathering the receiving report, the next task should be generating errors for the relevant team member, gathering the vendor invoice and doubling a three-way match. These should be done in parallel.

After all pre-tasks are completed, then the documents need to create vouchers.

Now the process is completed.
